

ABSTRACT

An image locking jewelry device designed to hide ~~and reveal~~ a customized image from view until the wearer reveals the image. The image unlocking jewelry device ~~collectively including~~ includes a lens mated to a casing and housing a liquid crystal display; a light emitting diode ~~therein~~; circuitry placed inside the casing and capable of sending signals to the liquid crystal display and the light emitting diode; and an image positioned between the lens and the circuitry. Voltage is sent from the circuitry to the liquid crystal display and the light emitting diode in order to reveal the image held underneath the lens.
